PROFESSIONAL SUMMARY

Data Science graduate with hands-on computer vision experience: built and deployed 2 image/video classification pipelines using OpenCV, TensorFlow/Keras and scikit-learn, including a MobileNetV2 transfer-learning model with 92.7% accuracy. Skilled in image preprocessing, feature engineering, and model evaluation (precision, recall, F1, cross-validation). Seeking a Computer Vision Intern role to develop, test, and benchmark models on real-world datasets.

TECHNICAL SKILLS

- **Computer Vision & Deep Learning:** OpenCV, TensorFlow, Keras, CNNs, Transfer Learning (MobileNetV2), Image Data Preprocessing, scikit-image
- **Machine Learning:** scikit-learn, Random Forest, SVM, Logistic Regression, Feature Engineering (GLCM, HOG), Classification Models
- **Model Evaluation:** Accuracy, Precision, Recall, F1-Score, 5-Fold Cross-Validation, Baseline Benchmarking
- **Programming & Data:** Python (scripting, data processing workflows), Pandas, NumPy, SQL (SQLite), Matplotlib, Seaborn, Plotly
- **Deployment & Tools:** Streamlit, Gradio, Git/GitHub, Microsoft Excel
- **Generative AI:** Foundational knowledge of LLMs and generative AI concepts (LinkedIn Learning)

PROJECTS

Deepfake Video Detection

Python, TensorFlow, Keras, OpenCV, MobileNetV2, Streamlit, Plotly

- Built an end-to-end deep learning pipeline using MobileNetV2 transfer learning (ImageNet) to detect AI-generated videos, achieving **92.7% accuracy, 94.1% precision, and 91.8% recall**.
- Engineered an OpenCV image preprocessing pipeline that samples 1 frame every 30 and resizes to 224×224 px, training a CNN classifier on **4,000 labeled frames**.
- Developed a Streamlit dashboard that accepts MP4, AVI and MOV uploads and returns real-time verdicts with a frame-by-frame probability chart in Plotly.
- Optimized inference by caching the loaded model across sessions, reaching **~45 ms** per frame on CPU and analyzing a 1-minute video in **~28 seconds**.

Breast Ultrasound Image Classification

Python, scikit-learn, OpenCV, scikit-image, Gradio

- Developed a machine learning pipeline to classify ultrasound images as Normal, Benign, or Malignant with a Random Forest, achieving **79% test accuracy and 78% 5-fold cross-validation accuracy**.
- Extracted texture (GLCM), shape (HOG), and intensity features from grayscale images using OpenCV and scikit-image, and benchmarked results against **2** baseline models (Logistic Regression, SVM).
- Deployed a Gradio web app for real-time image upload, classification, confidence-score visualization, and 3D pixel-intensity surface rendering.

Personal Finance Management System

Python, Pandas, SQL, Matplotlib, Streamlit

- Designed a financial tracking system that processes **400+** raw transactions, using SQL for storage and Pandas for automated cleaning and aggregation.
- Built an automated transaction categorization module achieving **92% accuracy, 90% recall, and a 0.91 F1-score**.
- Launched a Streamlit dashboard (Income, Expenses, Weekly and Monthly Spends) with Matplotlib visualizations, eliminating manual reporting.

EDUCATION

Loyola Academy (Osmania University), Secunderabad, India
B.Sc. in Computer Data Science and Data Analytics Engineering

Graduated 2026
CGPA: 7.94 / 10.0

CERTIFICATIONS

- LinkedIn Learning: **Understanding GenAI**

- Corporate Job Simulations (Forage): Data Analytics at Deloitte, JPMorgan Chase, Tata Group
- IBM: Python for Data Science, Data Analysis, Data Fundamentals
- HP LIFE: Business & Technology Skills
